

Task 2: Data Visualization and Storytelling Report

Superstore Sales Dashboard Analysis

Tool Used: Tableau

Dataset: Sample Superstore From Kaggle

Superstore Sales Dashboard

<Profit by Region>

Sales by Category

Monthly Sales Trend

Discount vs Profit

Sales by State

Top 6 Products

1. Objective

The goal of this project was to study the Sample Superstore sales dataset and make charts that show business information clearly. The dashboard was made to show how well the company is doing with sales how money it is making what is happening in different areas and how products are performing. The dashboard is easy to see and looks good.

2. Dashboard Overview

The dashboard has six charts that give a picture of how the company is doing with sales.

Dashboard Components

- ❖ Profit by Region
- ❖ Sales by Category
- ❖ Monthly Sales Trend
- ❖ Discount vs Profit
- ❖ Sales by State
- ❖ Top 6 Products by Sales

These charts together help find trends how well different areas are doing, which products are working and how discounts affect money made.

3. Visualizations and Business Insights

3.1 Profit by Region

Chart Type: Horizontal Bar Chart

This chart shows the profit made in different regions.

Insight

The Central region made the profit out of all regions. This means that the way sales are done in the West region is working well and could be used in areas that are not doing as well.

3.2 Sales by Category

Chart Type: Horizontal Bar Chart

This chart shows the sales in the three product categories.

Insight

Technology products are the best for making money. Should stay a main focus for the business.

3.3 Monthly Sales Trend

Chart Type: Line Chart

The line chart shows how sales change each month.

Insight

Sales went up over the time that was looked at, and some months had drops in sales. Overall the trend shows that the business is getting better.

3.4 Discount vs Profit

Chart Type: Scatter Plot

This chart looks at how discounts and profit're related.

Insight

Products that had discounts made less profit.

The company should check its discount plan to make sure it is not hurting profits.

3.5 Sales by State

Chart Type: Symbol Map

This map shows how sales there are in each state in the U.S.

Insight

California had the most sales. This map helps find which places are doing well and where there is room to grow.

3.6 Top 6 Products

Chart Type: Horizontal Bar Chart

This chart shows the products that sold the most.

Insight

The selling product was much better than the others.

Knowing which products are selling well helps focus on what to keep in stock what to market and how to sell.

4. Overall Findings

The dashboard shows some things about the business:

Technology is the product category that sells the most.

The West region makes the profit.

Sales have gone up over time.\

California is the place for sales.

High discounts often make money.

A few products sell a lot compared to others.

These results can help managers make choices about prices what to keep in stock, where to grow and how to market.

5. Conclusion

The Superstore Sales Dashboard did a job of turning sales data into useful business information using good charts. Right chart types were chosen for each part of the analysis so the dashboard is easy to read and looks nice.

This project showed how important it is to tell a story with data by showing sales details in a way that helps make smart business choices. The dashboard can be a tool, for checking how well the company is doing, finding patterns and helping with future plans.
